

Addendum to the Winter Weather Experiment Report for 2016:

Please note there was an error in the calculation of the HRAM downscaled QPF used during the 2016 Winter Weather Experiment. The High Resolution NMMB was used two times in the ensemble averaging along with the NAM CONUSNEST. Thus the advertised High Resolution ARW member was excluded during the period of the Winter Weather Experiment 2016. A correction was made in April 2016, past the conclusion of the experiment.

This error does not alter the experiment goal of evaluating the concept of applying different downscaling methods using multiple CAMs, as opposed to individual members. WPC will continue further testing and development of HRAM downscaled QPF.
